SUMMARY

Mobile developer with 2+ years of professional cross-platform experience, currently a Flutter Developer at Koda Tech Academy building a multiplatform C2C marketplace app. Dicoding Expert-level certified across Flutter, Android (Kotlin), iOS (Swift), and React, and an External Code Reviewer for Flutter and iOS submissions at Dicoding Indonesia. Shipped production apps on Google Play under the Zrif Apps developer profile, including a Dicoding IdCamp 2024 winning project.

PROFESSIONAL EXPERIENCE

Flutter Developer

Jun 2026 – Present

Koda Tech Academy

- Develop and maintain a multiplatform C2C marketplace app in **Flutter** as part of an IT consulting team, structured with Clean Architecture and **BLoC/Cubit** across 17+ feature modules; manage development/staging/production flavors with separate bundle IDs and signing, bilingual (ID/EN) localization, and versioned releases
- Build a real-time in-app chat system on **Supabase Realtime** with optimistic message delivery, image attachments, read receipts, and day-grouped history
- Deliver a listing "Boost" feature with in-app purchases via **Google Play Billing** and **Apple StoreKit**, including backend-verified activation and purchase-state recovery
- Own the full listing lifecycle (draft to mark-as-sold) with HydratedBloc draft persistence, paginated wishlist, and post-transaction reviews; build a community feature with role-based views, membership approval, threaded comments, and moderation tools
- Implement a trust & safety layer (ID/face-photo verification, badges, block/report) and integrate REST APIs via **Dio** with token auto-refresh, GPS-based addressing (Geolocator, Google Maps SDK), and deep linking via Android App Links / iOS Universal Links

External Code Reviewer

Sep 2025 – Present

Dicoding Indonesia (Part-Time)

- Review Flutter and iOS (Swift) submissions across Dicoding's professional mobile learning paths, evaluating architecture, state management, dependency injection, and test coverage
- Deliver written technical feedback in Bahasa Indonesia, focusing on actionable improvements in code structure, naming, and idiomatic platform usage

Independent Upskilling – Native Mobile Development

Mar 2025 – Sep 2025

Self-directed

- Deepened native platform expertise beyond cross-platform work, studying Android (Kotlin, Jetpack Compose) and iOS (Swift, SwiftUI) in depth; completed Dicoding's Android, iOS, and React Developer Expert paths (Jul–Aug 2025)

Mobile App Engineer

Mar 2023 – Mar 2025

Teravin Technovation

- Delivered two consecutive **React Native** vendor engagements (~1 year each) for enterprise clients alongside a senior mobile lead on a small team, using Redux and React Context API with a modular, feature-based structure
- Fintech / Digital Banking App**: built 4 feature areas spanning ~24 screens and 14 bottom sheets – User & Company Management (invite/remove employees, group creation, role changes), Early Wage Access (corporate-admin and employee variants), Withdrawal Flow (including withdrawal-account setup), and multi-role Transaction History (individual / employee / corporate) with filters by type, currency, direction, status, date, and group wallet
- Implemented a reusable Multi-Factor Authentication component supporting biometrics, Approove, and email/phone OTP, reused across EWA and withdrawal flows; integrated Intercom SDK for in-app customer support
- Smart Building / VMS App**: contributed to the user-facing mobile app within a multi-app ecosystem (user app + kiosk app + back-panel configurator handled by separate native teams); features included QR-based visitor flows, real-time messaging/notifications, and smart-lock / gate access via NFC and BLE
- Implemented the React Native bridge layer for the ICT access-control vendor protocol (NFC/BLE) consuming the vendor SDK held by the native Android team – pair-programmed and iterated on bridge contracts, testing, and debugging feedback with the native team under tech-lead supervision
- Integrated Linphone-based VoIP and video calling on the React Native side – consumed native-exposed APIs (SDK init, login, place / accept / reject call) and validated end-to-end audio and video call flows in collaboration with the native team
- Implemented OAuth2 social sign-in (Google & Apple) with JWT session management on the mobile side

TECHNICAL SKILLS

Mobile: Flutter / Dart, React Native, Kotlin Multiplatform, Android / Kotlin (Jetpack Compose), iOS / Swift (SwiftUI, UIKit, MapKit, Core Location)

State Management: BLoC / Cubit, Riverpod, Redux

Web & Backend: JavaScript / TypeScript, React, Next.js, Golang, PostgreSQL, Firebase, Supabase, RESTful APIs

Tooling: Git, CI/CD (GitHub Actions, Codemagic), SwiftLint, Play Store deployment

NOTABLE PROJECTS

GoService – Vehicle Maintenance Reminder <i>KMP, SwiftUI, Next.js, Supabase</i>	Launched on Google Play
- Single-handedly designed, built, and launched a vehicle service-log and maintenance-reminder product for the Indonesian market – a full ecosystem spanning an Android + iOS mobile app, a marketing landing page, and a backend – taking the app from first commit to Google Play release in roughly 4 weeks (174 commits over 18 active development days), owning product scope, engineering, design, and deployment end to end - Built the mobile app on a Kotlin Multiplatform architecture sharing a single Kotlin core (business logic, Room/SQLite persistence with versioned schema migrations, and a service-reminder / local-notification engine) across a native Jetpack Compose Android UI and a native SwiftUI iOS UI; offline-first with Koin dependency injection, spanning ~43k lines of code - Shipped the supporting web stack solo: a responsive Next.js / React / Tailwind landing page plus a REST feedback API the app posts into, backed by Supabase (PostgreSQL + Auth) with SQL migrations and an authenticated admin dashboard for triaging in-app feedback	
EduKita – Educational Platform <i>Flutter, Golang, PostgreSQL</i>	Winner – Dicoding IdCamp 2024
Built a full-stack UTBK/SNBT exam preparation app with Google Sign-In, progress tracking, and interactive learning modules; Flutter client uses BLoC state management with Clean Architecture, paired with a Golang + PostgreSQL backend designed and built from scratch	
Jejak – GPS Run & Walk Tracker <i>Swift, SwiftUI, MapKit, Core Location, Swinject</i>	Open-source on GitHub
- Open-source native iOS app (github.com/muhAzri/Jejak) that records runs and walks with a live route map, distance, pace, and elevation gain, with background tracking and all data kept on-device; feature-based Clean Architecture with Swinject DI, EN/ID localization, and adaptive layouts for foldable iPhones - Built a GPS-cleaning pipeline: a constant-velocity Kalman filter fusing position with Doppler speed and course, χ^2 (Mahalanobis) outlier gating, per-activity motion profiles, stop detection, and smoothed elevation gain; raw fixes are stored for replay, and the pipeline is unit-tested with Swift Testing on synthetic GPS tracks	
PokedexPocket – iOS Native App <i>Swift, SwiftUI, RxSwift, Alamofire, Swinject, SwiftData</i>	Open-source on GitHub
- Open-source iOS app (github.com/muhAzri/PokedexPocket) implementing Clean Architecture across Presentation / Domain / Data layers with Swinject for dependency injection and Repository Pattern for data access - SwiftUI + RxSwift reactive view models, SwiftData persistence for favorites, debounced search, infinite scroll, and two-tier image caching (50MB memory / 200MB disk); GitHub Actions CI with SwiftLint enforcement	
CashFlow – Personal Finance Manager <i>Flutter, Dart</i>	Published on Google Play
Offline-first personal finance app with BLoC state management, multi-currency support (7 currencies), encrypted local storage, budget alerts, and analytics dashboard – zero-backend, privacy-first architecture	
KiraUntung – Freelance Client App <i>WebView, Android</i>	1,000+ downloads on Google Play
Packaged a Malaysian client's (Social Leap Sdn Bhd) web-based F&B costing and profit-margin platform into a WebView mobile app and published it on Google Play (4.2-star rating)	
Floating Timer <i>Kotlin, Jetpack Compose</i>	Published on Google Play

CERTIFICATIONS

<i>Dicoding Indonesia – Expert level (highest tier) across all four professional mobile learning paths.</i>	
Flutter Developer Expert (Apr 2024)	iOS Developer Expert (Aug 2025)
Android Developer Expert (Jul 2025)	React Developer Expert (Aug 2025)

EDUCATION

Telkom University, Bandung – B.S. Informatics Engineering, Distance Learning Program (Sep 2026 – Present)
SMAN 15 Kota Bekasi – High School Diploma, Natural Sciences

LANGUAGES

Indonesian (Native), English (Reading & Writing: Proficient, Speaking & Listening: Conversational)
